Meeting Minutes
Date: 17th August 2020
Time: 10:00-10:40
Place: Google Hangouts Call

The following are points from the meeting:

- The main idea of the project was discussed with Dr.Gatt and some important remarks were made. These included:
    1. The idea of using more classes to classify the tweets rather than just positive or negative, for example numerical grading.
    2. The importance of taking care of tweets which may include both negative and positive feedback about a single currency, hence, we need to identify what is being spoken about.
    3. Taking care of tweets which may include opinions about multiple currencies in a single tweet
- Dr.Gatt suggested to look up shared tasks in Kaggle which may be useful and a good insight to the subject.
- It was suggested to read about aspect-based sentiment analysis and SemEval.
- The importance of reading the paper (100 pages long) suggested by Dr.Gatt especially the first 3 sections, and the 4th Chapter in the Speech and Language Processing book which is about Sentiment Alaysis
- Dr.Gatt suggested to try and find data sets from the Association for Computational Linguistics
- If the above is not possible, it was agreed that Twitter is a good option
- A good question could be: Can we identify the influence of certain people?
- A meeting will be held on the 2nd of September at 13:00.
